

...up to bridge collapse!

The Long Night of Science in Dresden takes place on 16th June 2017. The Faculty of Civil Engineering is involved again with numerous events and tours. At the Experimental Show "...until the beams bend" bridge models will be tested until it crackles, crunches and ... up to bridge collapse! These bridges are built by YOU, students. It wins the bridges, which has the best weight-load-ratio.

The bridge must meet the following requirements for participation:

Length: 104.5 cm
Width: max. 10 cm
Height: max. 20 cm
Weight: 1 g up to about 2000 g (significantly heavier constructions negotiable)

All materials may be used for the bridge construction. The load is carried out by a single load (see diagram on page 2). The type of exposure should be considered when choosing the support system. The bridge models must be submitted by Monday prior to the date of the Long Night (12th June) in ABS 05-035. The following prizes will be awarded:

1. Prize Free participation in the bridge excursion 2017
2. and 3. Prize Cinema vouchers
Prize for every bridge Food/Drink vouchers for the BBQ stand of the civil engineers

For further questions or more information, simply ask *Dipl.-Ing. Matthias Quast*, (matthias.quast@tu-dresden.de, ABS 05-035, Tel: 0351/463-36110). A brief e-mail to preregister is not a prerequisite to participate and not binding, but helpful for our planning and therefore highly appreciated.

Good luck and much success!

Appendix: Plan and photo of the loading device

The maximum height shown in the photo for a possible tension boom is also true for a possible superstructure. The bridge should not exceed a total height of 20 cm .
